Profile

Hi, I'm Jason. Having recently completed my Computer Science & Mathematics degree at BINUS University, I have a strong interest in software development, particularly in full-stack web development and blockchain technology. My experience includes building frontend and backend applications using JavaScript and Golang, as well as developing Web3 applications and smart contracts using Solidity. I'm passionate about building practical projects, continuously improving my technical skills, and exploring new technologies to create scalable and impactful software solutions.

Education

Jan 2019 - Dec 2024	Barcelor of computer science, Mathematics and Computer Science BINUS University
Jan 2025 - Apr 2025	Blockchain Developer, Blockchain Pelita Bangsa Academy
Jun 2022 - Nov 2022	Fronnd End Engineering, Computer Science Binar Academy
Nov 2021 - Apr 2022	Full Stack Web Developer, Computer Science Harisenin Millennial School
Jan 2019 - Dec 2024	Barcelor of computer science, Mathematics and Computer Science Universitas Bina Nusantara (Binus)

Employment

Jan 2026 - Present	Full-stack Web Development Velvett, Remote Developed full-stack web applications using JavaScript and Golang, building responsive frontend interfaces and scalable backend services. Integrated Web3 functionality, including smart contracts, blockchain interactions, and wallet connectivity, to deliver seamless decentralized application experiences.
Jun 2025 - Present	Blockchain Developer

HeLa Labs, Kota Tangerang, Banten, Indonesia

Design, develop, and maintain blockchain solutions for HELA Labs, focusing on HELA Chain. Build and deploy secure smart contracts, contribute to protocol enhancements, and integrate on-chain components with front-end and back-end systems.

Collaborate with cross-functional teams to deliver DeFi and NFT applications, while optimizing performance, gas efficiency, and security. Conduct audits, write comprehensive unit and integration tests, and ensure code quality through best practices.

Continuously research emerging Web3 standards, consensus models, and developer tools to drive innovation and strengthen the HELA Chain ecosystem.

Sep 2025 - Present

Solidity Developer**Snap Innovations Pte Ltd, Tangerang, Banten, Indonesia**

Design, develop, and maintain Solidity smart contracts for a wide range of Web3 applications, including DeFi protocols, and NFT collections. Implement secure contract architectures, optimize gas efficiency, and follow industry best practices to ensure reliability and scalability. Write comprehensive unit and integration tests, conduct thorough audits, and deploy contracts HELA Chain and other EVM-compatible networks. Collaborate closely with product managers, designers, and frontend engineers to deliver seamless blockchain experiences, while continuously researching new ecosystem standards, tools, and security techniques to stay ahead of Web3 innovations and improve overall development workflows.

Mar 2024 - May 2025

Web3 Frontend Developer**Adatama Teknologi Indonesia, Tangerang, Banten, Indonesia**

Driving the frontend development for cutting-edge Web3 solutions, I've been instrumental in creating and optimizing interfaces for decentralized applications, cross-chain bridges, and token swap websites. My responsibilities include:

- Developing and deploying dApp UIs: Consistently building engaging user experiences for smart contract interactions on multiple blockchain networks.
- Implementing secure bridge frontends: Facilitating the seamless transfer of assets between disparate blockchain ecosystems.
- Crafting intuitive swap platforms: Enhancing the usability and efficiency of decentralized token exchange interfaces.

I leverage Next.js, Ethers.js, and Rainbowkits for core development, ensuring strong integration with major blockchain wallets and a focus on security and performance. My work directly contributes to expanding the accessibility and functionality of decentralized finance.

Sep 2023 - Feb 2024

Frontend Developer**Suitmedia Digital Agency, Jakarta, Indonesia**

- Responsible for develop new features based on the UI/UX design that has been provided
- Collaborate with backend developers, designers, and other stakeholders to integrate frontend components with backend API.
- Troubleshoot and debug issues in the frontend code to ensure smooth functionality.
- Implement responsive design techniques to ensure that the user interface adapts appropriately to various screen sizes and devices, providing a

consistent experience.

- Test and optimize web view to ensure compatibility with different web browsers, such as Chrome, Firefox, Safari, and Edge
- Optimize the performance of the frontend by minimizing load times, reducing unnecessary requests, and optimizing assets like images and scripts.
- Work with version control systems, such as Git, to manage and track changes to the codebase collaboratively.
- Document code and maintain proper documentation to facilitate collaboration and future maintenance.
- Using the Nuxt3 framework in website development and SASS/SCSS as a CSS preprocessor

Projects

Jul 2026 - Jul 2026

Forge Solana Launchpad

Forge is a Solana-based token launchpad that allows users to create and launch their own SPL tokens through an intuitive interface. The project features on-chain token management, wallet integration, and token price chart visualization, leveraging Solana's high-performance blockchain infrastructure.

Demo: <https://forge-sol.vercel.app/>

Github: https://github.com/JasonTongg/Forge_Solana_LaunchPad

Jul 2026 - Jul 2026

Verdict Prediction Market

Verdict is a decentralized prediction market built on Solana, allowing users to create and participate in markets on future event outcomes. The project showcases Solana program development, PDA-based account management, on-chain state management, and wallet integration.

Demo: <https://verdict-sol.vercel.app/>

Github: https://github.com/JasonTongg/Prediction_Market

Dec 2025 - Jan 2026

Juryx Decentralized Multi-Signature Wallet

Juryx showcases how modern smart contract wallets can remove single points of failure by requiring collective approval for on-chain actions, giving teams a safer and more flexible way to manage digital assets than traditional EOAs. Built on the latest Ethereum standards, it uses an ERC-4337 smart account architecture with centralized EntryPoint validation, M-of-N multisignature authorization, and Paymaster support for potential gasless transactions. The wallet is deployed deterministically via CREATE2 for predictable addresses across networks and offers full control over ETH transfers, token interactions, and custom contract calls, all enforced by on-chain validation rules.

Frontend: https://github.com/JasonTongg/Juryx_Frontend

Contract: <https://github.com/JasonTongg/Juryx>

Sep 2025 - Oct 2025

CCIP Crosschain Rebase Token

A token bridging, and yield staking using the Cross-Chain Interoperability Protocol (CCIP) framework by Chainlink.

Frontend: <https://github.com/JasonTongg/CCIP-Crosschain-Frontend>

Contract: <https://github.com/JasonTongg/CCIP-RebaseToken-CrossChain>

Demo: <https://ccip-crosschain.vercel.app/>

Oct 2025 - Nov 2025

Zypher DEX

This decentralized exchange showcases fast, secure, and user-friendly token swapping across major liquidity models, including Uniswap V2, V3, and V4-style mechanics. The goal of the platform is to make decentralized trading accessible while maintaining full trustlessness and on-chain transparency.

Frontend: <https://github.com/JasonTongg/Zypher>

Contract: <https://github.com/JasonTongg/Uniswap-V2>

Demo: <https://zypher-dex.vercel.app/>

Feb 2023 - Mar 2023

Youtube Clone

YouTube Clone is a video-sharing web application inspired by YouTube, featuring a familiar interface for browsing videos, searching for content, and watching videos. Built to replicate the core YouTube experience, the project demonstrates modern frontend development and interactive web application design.

Demo: <https://youtube-clone-jason.vercel.app/>

Github: <https://github.com/JasonTongg/youtube-clone>

Dec 2022 - Dec 2022

J-Movie

J-Movie is a movie discovery web application that allows users to explore movies and browse movie information through a clean, user-friendly interface. Built with modern web technologies, it provides an intuitive experience for discovering movies.

Demo: <https://j-movie.vercel.app/>

Github: <https://github.com/JasonTongg/J-Movie>

Dec 2025 - Dec 2025

Jcollateral Lending Protocol

JCollateral is a decentralized collateralized lending protocol designed to demonstrate the core mechanics behind on-chain borrowing, collateral management, and risk enforcement in DeFi systems. The project focuses on how users can deposit assets as collateral, borrow against them, and manage positions securely through transparent smart contract logic.

Frontend: https://github.com/JasonTongg/JCollateral_Frontend

Contract: <https://github.com/JasonTongg/JCollateral>

Demo: <https://jcollateral.vercel.app/>

Dec 2025 - Dec 2025

JUSD Stablecoin Protocol

This project is a decentralized stablecoin system designed to demonstrate how overcollateralized, on-chain stable assets can be built using transparent smart contract logic and real-time price feeds. JUSD allows users to mint, manage, and maintain a USD-pegged stablecoin while preserving full decentralization and protocol-level security.

Frontend: https://github.com/JasonTongg/JUSD_Frontend

Contract: <https://github.com/JasonTongg/JUSD>

Demo: <https://jUSD-stablecoin.vercel.app/>

Sep 2025 - Oct 2025

Tale of Glory and Gold

a blockchain-based joke-telling game where players entertain a virtual king with their best jokes to earn ERC-20 tokens. If the joke is deemed good, the player receives tokens that can be used in a lucky draw to win NFTs, native tokens, or more ERC-20 rewards. The project integrates smart contracts for token rewards and prize distribution, combining humor, creativity, and decentralized technology

into a fun play-to-earn experience that rewards players for making others laugh.

Demo: <https://talesofgoldglory.com/>

Github: <https://github.com/JasonTongg/Tales-of-gold-and-glory>

Sep 2024 - Oct 2024

NFT Marketplace

A web3 platform that enables users to explore, mint, buy and sell non-fungible tokens (NFTs) on a blockchain-integrated marketplace. Built with wallet connectivity and token listings, the project delivers a streamlined user experience for creators launching digital assets and collectors browsing, bidding, and trading NFTs. It demonstrates strong competencies in smart contract integration, front-end Web3 interface design and marketplace mechanics, making it a solid showcase of blockchain application development.

Demo: <https://jason-nft-marketplace.vercel.app/>

Github: https://github.com/JasonTongg/NFT_Marketplace

Oct 2024 - Present

Jikuna

Jikuna is an active community project that has recently launched an NFT minting event. The project offers a whitelist system featuring OG and Jikulist roles, indicating a structured approach to community engagement. While specific details about Jikuna's objectives and features are limited, its focus on NFTs and community involvement suggests an emphasis on digital collectibles and fostering a vibrant user base.

Apr 2024 - Jul 2024

Decentralized Cloud Infrastructure (DCI)

DCI is a Web3 platform on Ethereum that offers a decentralized marketplace for renting and sharing cloud resources like server space, computing power, and GPU capacity. Using smart contracts, it enables scalable, on-demand infrastructure access. Its tokenomics include a revenue-sharing model to reward token holders.

Mar 2024 - Apr 2024

Oxnumber

OxNumber is a privacy-first platform that allows users to acquire phone numbers without KYC, protecting against SIM swap fraud and enhancing digital anonymity. It offers unique, non-reusable numbers via a Telegram bot for secure use across various apps and platforms. Powered by the \$OXN token, OxNumber supports fast SMS processing with stable fees and broad app compatibility.
